READ ME · A SET OF ADD-ONS FOR CLAUDE

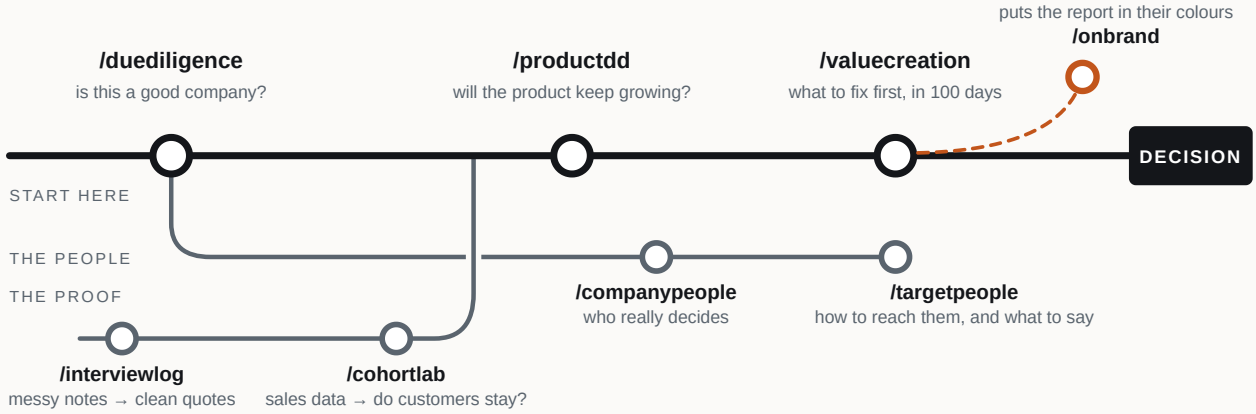

THE DILIGENCE STACK.

8 TOOLS · 2 PACKS
SET-UP: **3 MINUTES**
YOU GET: **A WORD REPORT**

Give Claude a company name, get back a **written report**: the answer on page one, a mark beside every number showing how solid it is, and a list of what still needs checking. The tools pass work to each other, so nothing is researched twice.

HOW THE TOOLS FIT TOGETHER

use one on its own, or run them in order

WHAT IS BEHIND EACH QUESTION

every point checked, graded, and scored out of five

IS IT A GOOD COMPANY? `/duediligence`

The money
Revenue, margins, cash, debt. From filed accounts, or from proxy signals where there are none.

The people
Who runs it, who they hired, who left and when.

The key events
Funding, acquisitions, big customer wins and losses, restructurings, sites opened or closed.

Who owns it
Who controls the company, and what they want from it.

Where it stands
Who it competes with, where it wins, and where it is losing.

WILL THE PRODUCT KEEP GROWING? `/productdd` — EIGHT CHECKS, EACH SCORED OUT OF FIVE

1. **What problem does it solve?** Ask five customers, without prompting. If they describe the value the same way, the positioning is real. Then: does the person who *pays* feel the pain, or only the person who uses it? If only the user, sales drag on for months.
2. **Who is the right customer?** One group often loves the product while the rest leave. The average hides it. The most common finding.
3. **Do customers stay?** A leaky bucket. If the drop-off levels out there is a loyal core. If it keeps falling, sales are refilling a bucket with no bottom. Built from raw customer data, not management's chart.
4. **How big is the market, really?** Count real buyers from the bottom up. Ignore "the market is €7bn, we'll take 1%". A few big accounts, or thousands of small ones? Different rivals, different prices.
5. **What stops a competitor copying it?** Features get copied. The cost of switching, data that improves with use, and access to customers do not. And could the customer build it in-house?
6. **Does the price grow with the value?** If a customer gets three times more value and pays the same, income from existing customers is capped. Sales effort will not fix it.
7. **Does the sales approach fit the price?** An €80k contract needs a salesperson. A €500 product cannot afford one. Does it sell without the founder in the room?
8. **Can the team deliver the plan?** Shipping pace, whether they talk to users, how much old code is in the way. Tells you if the plan after investment is realistic, or just nice on paper.

How does it work

Every number is graded

A checked	B they said	C estimate

Accounts and figures worked out from raw data, versus what the company said, versus an estimate. The mark sits next to the number.

No source, no number

Each claim points to a document or an interview on the source list. A check runs before printing and names any sentence that fails.

Dots joined before scoring

Four small problems in four places are often one problem. It looks for the name that keeps coming back.

What is missing is listed

Anything it could not check becomes a line: what is needed, who has it, how urgent.

How to install

OPTION A — THE CLAUDE APP

1. Unzip the pack. Open `claude-app-upload/`, one zip per tool.
2. In Claude: **Settings** → **Skills** (or **Customize** → **Skills**), then **Upload skill**. Add each zip.
3. Ask **"which diligence skills do you have?"** to check.

OPTION B — ON YOUR OWN COMPUTER

1. Copy the folders in `skills/` to `~/.claude/skills/`.
2. Restart Claude. Type `/` to see them.
3. They need `python-docx`, plus `pandas` for `/cohortlab`.
